Creating Storage Account

Step1: Click on the storage account and click create

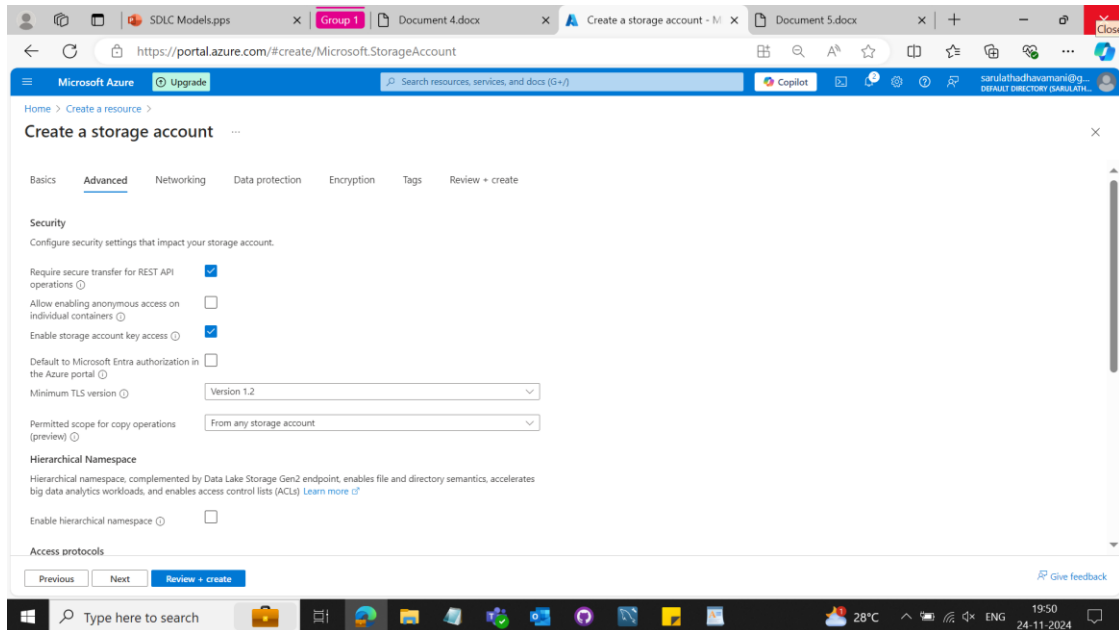

Step 2: Set the storage account name and choose the primary service you want to create

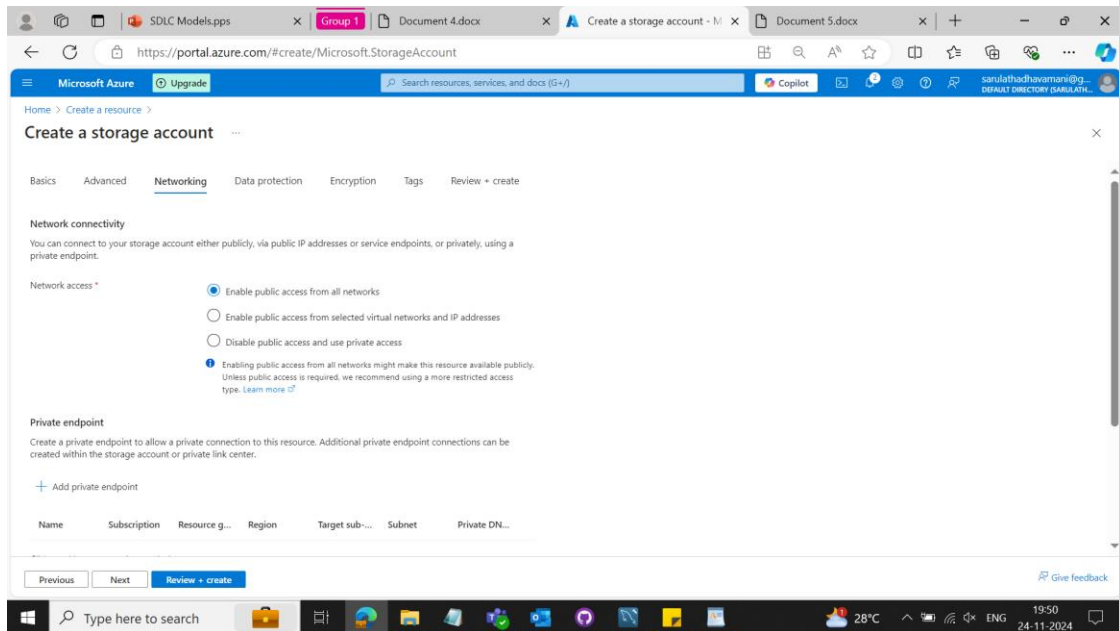

(I chose Azure Blob Storage)

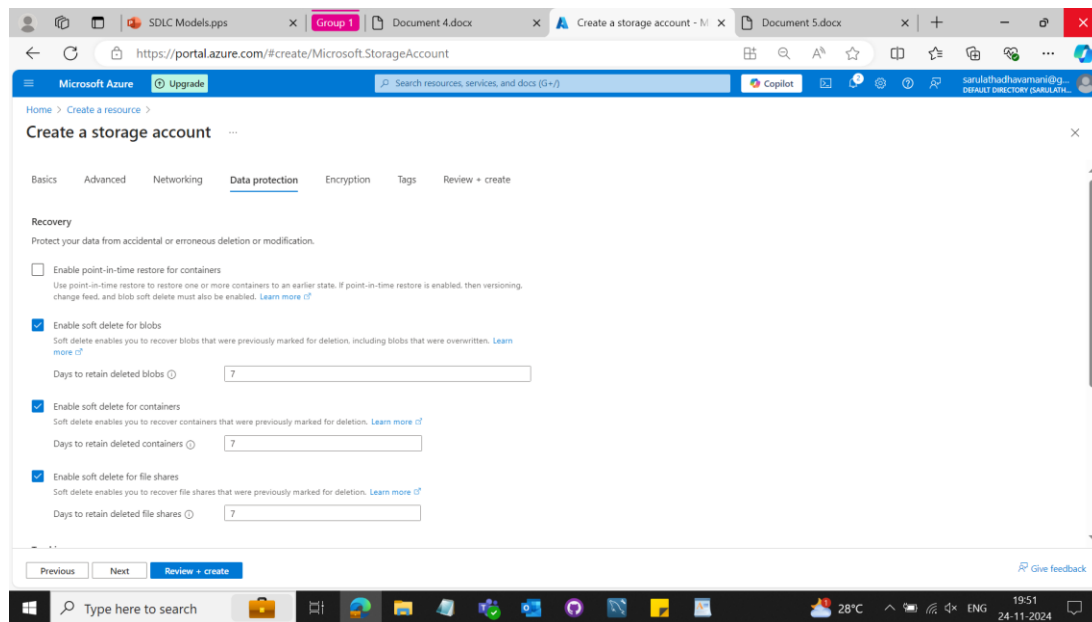

Step 3: In advanced tab, do not chose anything just default settings and click next

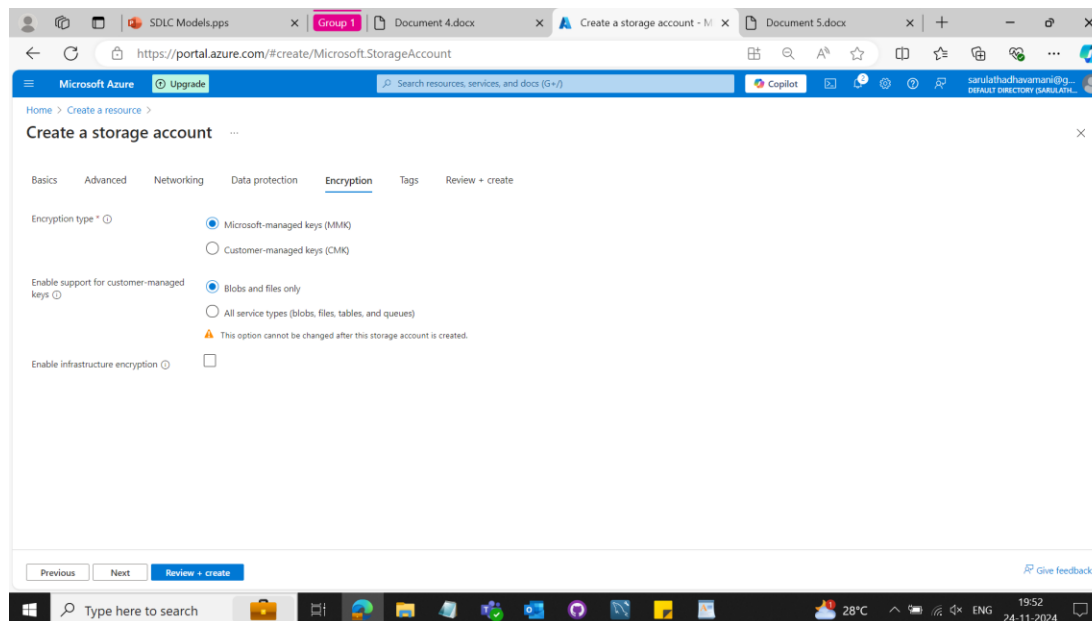

Step 4: Click next in networking tab

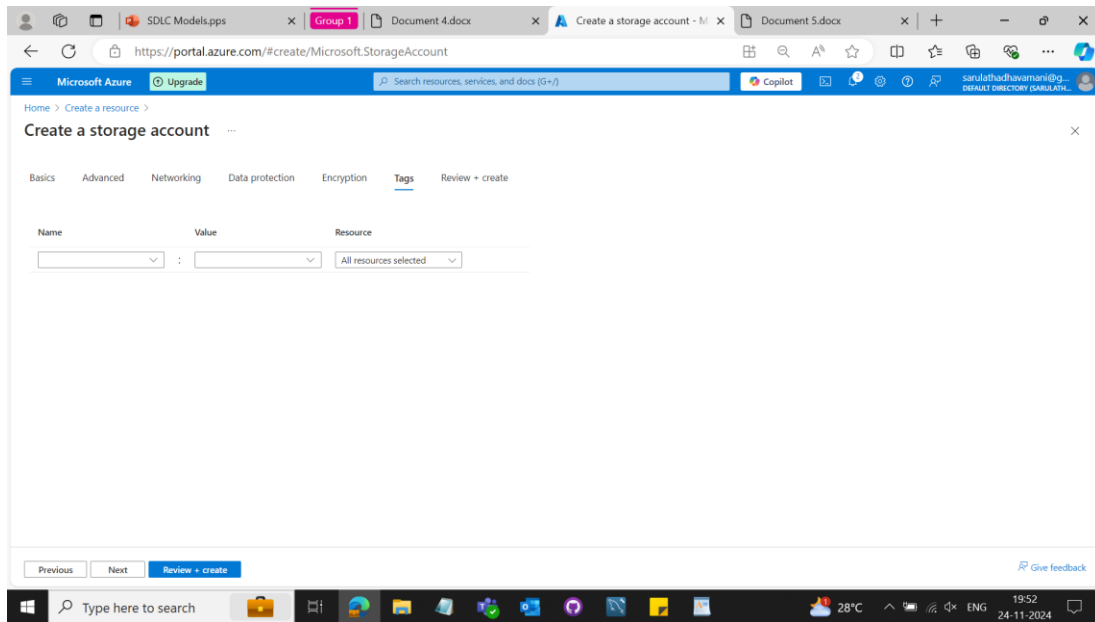

Step 5: in data protection tab, do not enter anything only default settings and click next

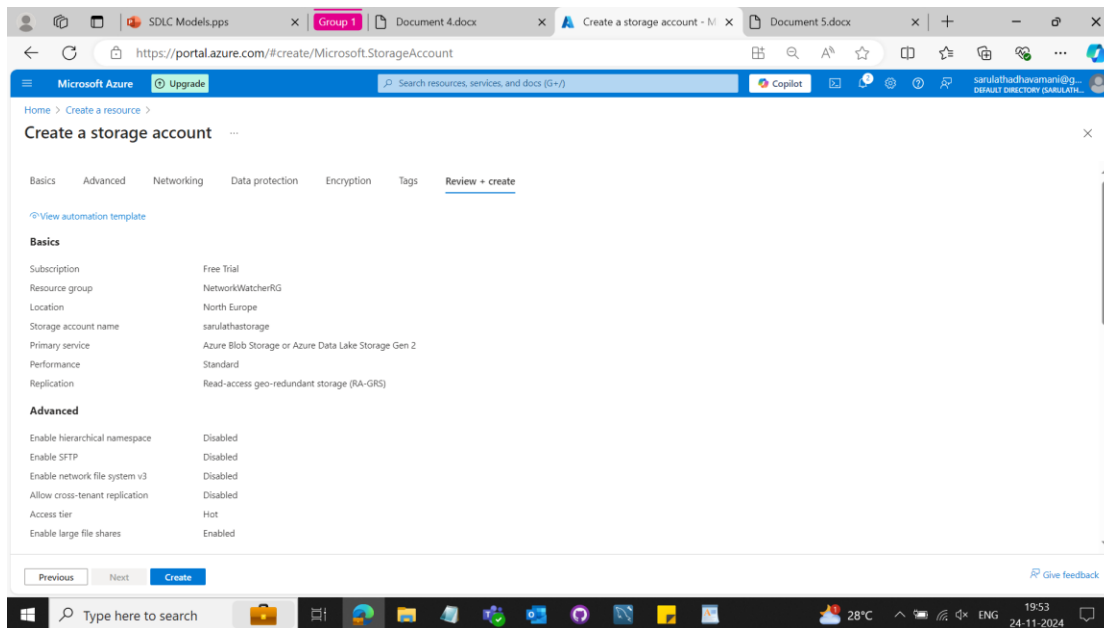

Step 6: Encryption is used to set the encryption key to the storage account, don't touch anything click next

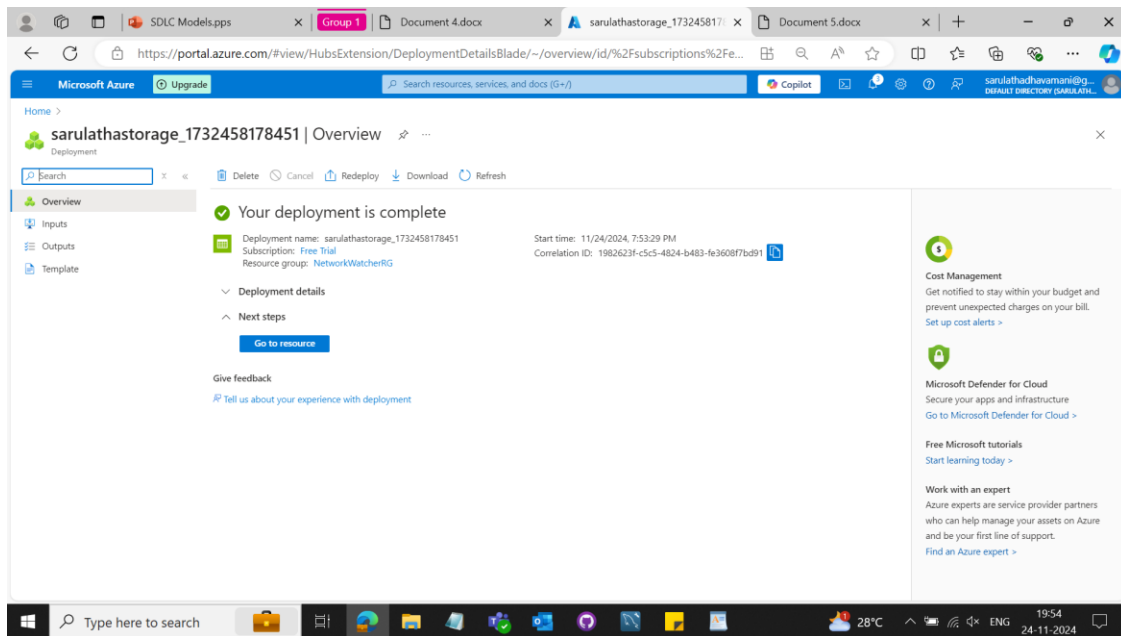

Step 7: Click next in tags tab

Step 8: Once all done, review once and click create

Step 9: Storage account is created

Step 10: deleted the storage account by entering the storage name and submit to delete the account
